

Emp ID- 85010914

Emp Name- Dongeshwar Sudhiksha

Case Study-

Create 5 Thread groups

Step 1 -Add number of threads -5

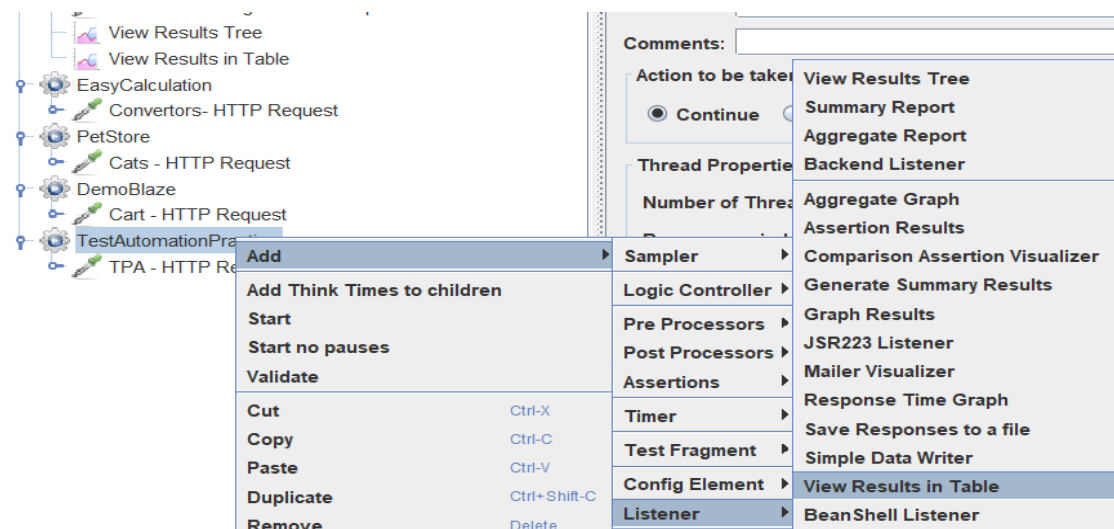

Step 2- Ramp-up period 3

Step 3- Loop count- 2

This should be designed for all thread groups

The screenshot shows the 'Thread Group' configuration window. The 'Name' field is set to 'Thread Group1'. The 'Comments' field is empty. Under 'Action to be taken after a Sampler error', the 'Continue' radio button is selected. In the 'Thread Properties' section, 'Number of Threads (users)' is set to 5, 'Ramp-up period (seconds)' is set to 3, and 'Loop Count' is set to 2. The 'Same user on each iteration' checkbox is checked. Other options like 'Delay Thread creation until needed' and 'Specify Thread lifetime' are unchecked. The 'Duration (seconds)' and 'Startup delay (seconds)' fields are empty.

Step 4- Add Listeners

Step 5- Run and Validate

2. Convertors- HTTP Request

Objective:

To test the performance and reliability of the Convertors page under multiple concurrent user requests and analyze response time, latency, and successful request execution.

[illegible]

3. Cats - HTTP Request

Objective:

To evaluate the performance of the Cats page by generating concurrent HTTP requests and validating the application's response time, latency, and successful responses under load.
